

DAWN BUCKINGHAM
STATE SENATOR

Statement on Senate Bill 759

During the 84th legislative session, the legislature passed a law that created greater access to new and less expensive biosimilar treatment options for Texans who require a complex biologic medicine for their disease or condition. SB 759 will help physicians continue to stay up to date on any changes to their patients' care by ensuring they receive notification from a pharmacy in the event a biosimilar medication is substituted for a biological medication.
